Market DataUpdate

Food Security and Nutrition Analysis Unit - Somalia

Monthly Market Analysis, June 2011

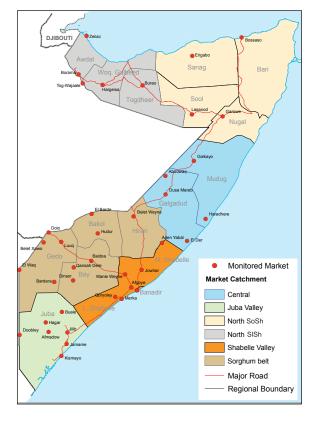

Highlights

In June 2011, the Consumer Price Index (CPI), which is based on a fixed minimum basket of goods and services, increased by 6-12 percent in Somali Shillings zones (South, Northeast and Central) and remained stable in Somaliland. The level of inflation jumped to an all time high in the south, surpassing the 2008 hyperinflation period by 39 percent. Compared to the same month a year ago, the inflation rose by 18-69 percent in Somali . Shilling (SoSh) zones, while remaining stable in Somaliland Shilling (SISh) zones. Since March 2007 (reference period), the inflation rate accelerated significantly (136-253%) in SoSh areas but remained relatively steady

The food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price inflation in the current hunger period is considerably higher than the same month last year due to the food price in theto exhausted local grain stocks in the domestic markets, high demand, reduced cross-border trade inflows, low humanitarian food supplies in the South and accelerating fuel prices as well as imminent below normal Gu 2011 cereal harvest. In the last month, prices of white maize increased by 6-12 percent across main markets of the Shabelle and Juba regions. Sorghum price, on the other hand, increased rapidly (9%-14%) in Sorghum Belt and Banadir regions while sustaining their previous month levels in most markets in Northwest, Northeast $and \ Central. \ However, when compared to June \ last year the cereal prices are significantly higher in all \ regions.$ In particular, red sorghum price increased in most markets of the Sorghum Belt (170-240%), Central (77%), Northeast (61%), while maize price accelerated in Shabelle (158%) and Juba (93%) regions. Increase in white sorghum price was however comparatively moderate in Northwest (23%).

Except for diesel which increased in most regional markets throughout the country, prices of imported $commodities \ (rice, sugar, wheat \ flour, vegetable \ oil\ and \ petrol)\ showed\ mixed\ trends\ with\ a\ more\ pronounced$ increase observed in the southern regions. This trend is mostly attributable to the volatile security situation which affects trade movement in the South as well as reduced supplies to southern and central regions from Bakkara market which is currently dysfunctional. Compared to a year ago, the prices of all imported commodities are generally higher in most monitored markets. In addition to increased international prices, the rising price trends are due to several factors, including increased taxation and import levies by multiple authorities and extortion by freelance militias, continuous trade disruptions caused by volatile security situation in South-Central and fuel-induced inflation in transport costs. The imported commodity prices are projected to augment further with the start of monsoon season (early June) as the strong winds and waves limit sea freight deliveries to the ports.

Livestock prices showed a mixed trend in June 2011 across Somalia. Compared to the same month last year, the livestock prices are lower in most southern regions, stable in Central but slightly higher in the North. These trends are attributable to low demand as well as undersupply, occasioned by lack of saleable animals as livestock has not yet fully recovered from prolonged dry weather conditions. However, the milk prices are slowly on a downward slump as the rainy season progresses and milk production improves in most regions. Similarly, with the discontinuation of water trucking in the current rainy season, water prices continue to slow down, though marginally in most reference markets.

Labour wages remained relatively stable throughout June 2011 in most regions. However, faced with rising prices of grains, purchasing power especially of the poor and destitute has greatly weakened. The monthly terms of trade (ToT) between daily labour wage and main staple cereals (maize and sorghum) deteriorated considerably in South Somalia while sustained their levels in June in the North and Central regions, due to stable labour and cereal prices over the past month. However, annual comparison of the ToT indicates particularly large declines in the southern regions, about 58-64 percent in the Sorghum Belt, Shabelle and Juba regions; 29-50 percent decrease in Northeast and Central and 17 percent decrease in Northwest (white sorghum). Only 3-5 kgs of these cereals could be purchased with one day of labour across the country, with the exception of Northwest where the ToT in June was equivalent to 7kgs.

Exchange rate between USD to Somali Shilling (SoSh) and Somaliland Shilling (SISh) remained relatively stable in June 2011. However, SISh seemed to have gained significant value (12%) when compared to June 2010 mainly due to sustained implementation of prudent monetary policies by the Government of Somaliland. The SoSh remained stable in the same period of comparison.

Regional Highlights

Juba Valley: prices of most monitored commodities have remained generally stable in the past one month except for local cereals and livestock prices. While cereal prices increased due to low market supply resulting from last season crop failure, livestock prices dipped as a result of oversupply following massive in-migration from Gedo and Northern Kenya and also due to low regional demand (particularly Garissa market). The rapid rise in maize prices led to a decline in the ToT by 15 and 61 percent from the previous month and last year respectively.

Sorghum Belt: with the exception of diesel and cereals which increased, prices of most monitored commodities remained stable in June. However, when compared to same time last year, the prices are considerably higher for imported commodities, local cereals while lower for local quality livestock. Lower price for the latter is mainly attributable to over-supply as pastoralists flood local markets in attempt to cover the rising cost of living. Increased cereal prices coupled with stable labour wage rates led to a slight weakening of the purchasing power (7%).

Shabelle Valley: over the previous month, prices of imported commodities and cereals rose considerably while labour wages declined. The increase in the price of imported commodities and cereals is attributed to low supply and high demand while low labour wage rate is due to intensified labour competition. Reduced labour rates and rising cereals reduced the ToT to a low of 18 percent compared to May.

Central: prices of most monitored commodities remained generally stable in the past month. However, when compared to the previous year, the prices are particularly higher for imported commodities, cereals and livestock. Stability in cereal prices and labour rates sustained the ToT to its level in the previous month. The purchasing power however weakened by more than half when compared to same period last year.

Northeast: with the exception of imported commodities which appreciated marginally (1-8%) and livestock prices and milk which slumped (3-25%), all other monitored commodities remained firm in the month of June 2011. The price changes are due to improved milk production and over supply of saleable livestock. Slight decrease in goat price and imported rice price increase settled the ToT 4 percent lower than it its May level.

Northwest: prices of most monitored commodities remained stable except those of livestock, milk and cereals. Low supply of milk and livestock and reduce supply of cereals from Ethiopia and Southern Somalia have pushed prices upwards. Stability in labour wage rate and slight increase In rice prices pushed the ToT 4 percent below the May level.

Banadir: while all other commodities showed mixed trends, local cereals and milk increased (10-21%). The prices of all commodities are however significantly higher than a year ago. The ToT labour to cereal rate is 15 percent lower than the previous month and nearly half its level the same month last year.

This Market Data Update is a monthly report that presents a compilation of tabulated graphical market information produced regularly as part of the monthly monitoring process.

The weekly price data is collected from 44 main markets throughout Somalia since 1995.

The 5-year period of 2003-07 was characterised by fairly stable prices and relatively low inflation. In this bulletin these years are used as a reference period for seasonal trends comparison.

Market analysis is an integral part of all of FSNAU's Annual Food Security Projections and seasonal technical reports (Technical Reports on FSNAU Post Gu and Deyr Analysis).

This data is available online on www.fsnau.org/ids.

Technical and

International Market Highlights

Diesel: Crude oil prices in Abu Dhabi/Dubai, the main sources of Somalia's oil imports, remained virtually steady, slowing marginally (2%) from its May 2011 level to settle at \$107 per barrel in June 2011. The current price, however, is 47 percent higher than the same month last year. International crude oil prices are projected to remain high in the short-run, as long as supply interruptions² occasioned by the political unrest, tensions and conflict in the oil-rich countries of Middle East and North Africa persist. Oil price transmission from international to Somalia markets is clearly evidenced in annual increases of diesel prices in the main port cities of Bossaso (7%) and Mogadishu (32%), respectively. On a monthly basis, diesel prices remained stable in both cities over the previous month. The faster acceleration in the year on year diesel prices in Mogadishu as opposed to Bossasso are mainly due to high levels of insecurity, disrupted main supply market (Bakara) and multiple taxation regimes in the former as opposed to latter market. Domestic prices of diesel are projected to remain firm to high in the short-run in the face of high international oil prices as well as reduced supply into the country during high seas (June-September).

Rice: international export prices of rice³ were slightly up in June, after declining marginally in May 2011 to close at USD 423. This is a reflection of strong import demand and uncertainty over export prices in Thailand, the world's largest rice exporter. At the current levels, rice export prices are nearly 30 percent higher than a year ago but 45 percent below their peak in May 2008. In line with international price trends, retail prices of imported rice in Mogadishu and Bossaso cities remained relatively stable in June 2011 but are higher compared to a year ago, by 9% and 39%, respectively. International rice prices are projected to firm in the short-run as current international inventories are expected to become more comfortable 4. In Somalia, rice price developments in the coming months are mostly likely to be on the upward as as demand will likely tighten following depletion of locally produced cereal stocks.

Sugar:

The FAO Sugar Price Index averaged 359 points in June, up 14 percent from May, only 15 percent below its January record and significantly higher (59%) than a year ago. The price strength reflects dynamic short-term demand against tight exportable availabilities, notably in Brazil, the world's largest sugar producer where production is forecast to fall below last year's level⁵.

The international price development of the last month has not yet passed through to markets of Somalia where sugar prices (Mogadishu and Bossaso) remained generally stable during June. In the shortrun, international sugar prices are likely to remain high in the face of reduced exportable availabilities in several major exporting countries. Sugar price development in the next year will depend on weather patterns of the new 2011/2012 season in major producing regions⁶.

Cooking oil: The FAO Oils/Fats Price Index averaged 257 points in June, down marginally from May 2011 but is 53 percent above the corresponding value in June last year. Continued production uncertainties and expectation of stronger world import demand sustained soybean oil prices. By contrast, palm oil prices eased further, reflecting improved supply prospects and ample export availabilities in Southeast Asia.

Vegetable cooking oil price transmission from international to local markets of Somalia is evident through annual price increases (from June 2010) of 36 and 40 percent in Bossaso and Mogadishu port cities, respectively.
