Food Security and Nutrition Analysis Unit - Somalia

Monthly Market Analysis, March 2011

Highlights

In March 2011, the Consumer Price Index (CPI), which is based on a fixed minimum basket of goods and services, remained stable in all zones, except in Northeast, where it exhibited a monthly increase of 4 percent. Compared to the same month a year ago, the inflation is 15-35 percent higher in Somali Shilling (SoSh) and stable in Somaliland Shilling (SISh) zones. However, the inflation rate is still significantly above the reference value (March 2007) in SoSh areas, (59-171%); it is equivalent to only 14 percent in SISh zone.

In the last month, the prices of locally produced cereals increased in markets of Juba and Banadir regions, while remaining stable in other markets. Rising cost of cereals in these regions is attributable to high demand from neighbouring areas and hoarding by retailers and producers in view of the anticipated low Gu 2011 seasonal production. Compared to a year ago, the local cereal prices are considerably higher both for maize (39-65%) and sorghum (83%) in the respective producing southern regions (Juba, Shabelle and Sorghum Belt) reflecting low cereal supply and volatility of trade activities due to insecurity. Conversely, in Northwest the locally produced cereal prices are favourable for consumers due to high supply from bumper Gu/Karan 2010 harvest in the zone, which brought yellow maize prices down significantly (68%), and kept white sorghum prices stable compared to last year (Mar. '10).

Imported commodity prices have not changed considerably since February 2011, with the exception of fuel in Sorghum Belt, wheat flour in Mogadishu, and rice in Central, Northwest and Banadir. However, the prices of all imported commodities are generally higher compared to a year ago in most monitored markets with the exception of those in SISh areas (marginal declines of sugar, vegetable oil and rice). The rising prices of imported commodities are mainly due to increased taxation by multiple authorities and freelance militias, ripple effect of increased diesel prices inflating transportation costs and trade disruption attributed to fighting in the south in March 2011.

Livestock prices showed a slight monthly increase in March in most markets, although they are significantly lower when compared to the same month last year. The monthly increase in prices of livestock are mainly attributable to undersupply, occasioned by lack of sellable animals due to the ongoing drought situation. In contrast, camel local quality prices decelerated by 32 percent in Northwest while remaining stable in all other regions compared to Feb '11. Low seasonal calving and poor pasture conditions have resulted in low milk supplies and increased milk prices in North, Shabelle and Juba regions. Further, water prices rose moderately (12-23%) across the country due to depleting water resources and intensified water resource competition resulting from ongoing drought. Prices of other essential items exhibited mixed trends.

Labour wages showed either relative stability or slight declines in March. Faced with rising prices of grains, the peoples' purchasing power is greatly eroded. The terms of trade (ToT) between daily labour wage and local cereals declined in all zones of the North, Central, Juba and Shabelle, while maintaining their levels as of February 2011 in all other regions. Compared to a year ago, significant decline in the ToT is observed in southern regions of Shabelle (32%), Juba (61%) and Sorghum Belt (45%). The amount of cereals that can be exchanged for one day of labour is equivalent to 3-6kg, with the lowest ToT recorded in Central.

Exchange rate between USD to Somali Shilling (SoSh) and Somaliland Shilling (SISh) remained relatively stable in March 2011 in most parts of Somalia with marginal appreciation observed in Somaliland. SISh gained significant value (25%) when compared to March 2010 mainly due to $Government\,control\,of\,the\,SISh\,and\,higher\,foreign\,exchange\,earnings\,from\,livestock\,exports\,as\,well$ as from the remittances from diaspora. The SoSh remained stable in the same period of comparison.

Regional Highlights

Juba Valley: prices of most monitored commodities remained generally stable in the past one month except for maize, milk and cattle which mounted from the February 2011 levels. The decline in casual labour wage rate consequently worsened the ToT between labour and maize by 13 and 61 percent from the previous month (Feb. '11) and last year (Mar '10), respectively.

Sorghum Belt: prices of most monitored commodities remained generally stable over the last month. The exceptions are diesel, petrol and livestock for which prices are moderately above their respective levels in Feb 2011. However, stability in cereal prices was undermined by reduced purchasing power attributable to reduced labor rates (9% decline). .

Shabelle Valley: prices of most monitored commodities remained stable over the month of March 2011. However, livestock prices declined in most markets. Stability in labour rates and cereal prices over the month of March 2011 maintained the ToT. However, the purchasing power has significantly weakened when compared to a year ago, with the ToT labor to cereal exhibiting a decrease of 32 percent.

Central: labour wage rates remained generally stable in the zone, while changes in the prices of sorghum and a local goat and other items over the past one month were marginal, with no effect on the terms of trade. Hence, as in Feb11, 35 kilograms of cereals can be fetched by the sale of one local goat.

Northeast: with the exception of milk and cowpea prices, which appreciated by 15 and 31 percent over the last month, respectively, livestock prices', purchasing power and other monitored commodities remained generally stable in March 2011 compared to the previous month.

Northwest: all other commodities includeing cereal prices are stable except camel prices significantly fell (32%). labour to cereal ToT is at the same level as of last month.

Banadir: sorghum prices levels are significantly elevated (16%, 155%) when compared to the previous month and a year ago, respectively. Labour rates improved marginally thus leveling the ToT between labour rates and cereals.

Funding Agencies

This Market Data Update is a monthly report that presents a compilation of tabulated graphical market information produced regularly as part of the monthly monitoring process.

The weekly price data is collected from 44 main markets throughout Somalia since 1995.

The 5-year period of 2003-07 was characterised by fairly stable prices and relatively low inflation. In this bulletin these years are used as a reference period for seasonal trends comparison.

Market analysis is an integral part of all of FSNAÚ's Annual Food Security Projections and seasonal technical reports (Technical Reports on FSNAU Post *Gu* and *Deyr* Analysis).

This data is available online on

International Market Highlights

Diesel: The prices of Abu Dhabi/ Dubai crude oil, ¹ is the main source of oil import into Somalia, sustained its upward trend of the last 30 months, settling at \$109 per barrel in March 2011. The current price reflects 10 percent and 40 percent increases from last month and last year respectively. The oil prices are expected to continue rising, so long as the political unrest in the oil-rich Middle East and North Africa regions persists. International oil price transmission is clearly manifested in Somalia where current diesel prices in the country's main port cities of Mogadishu and Bossaso are 18 and 32 percent higher than the same month last year, respectively. However, the prices remained stable between February and March.

Rice: international export prices of rice² decreased marginally in March 2011, averaging USD 429 per ton, which is reflective of ample export supplies following the recent harvests in the large exporting countries in Asia. At the current levels, prices are nearly 45 percent below their peak in May 2008. In contrast, current retail prices of imported rice in Mogadishu city are higher than last month (16%) and last year (13%) mainly due to rising freight and insurance charges resulting from surging international crude oil prices and persistent piracy along the Somali coastline. The cost of rice however remains relatively stable in Bossaso over the same periods. According to GIEWS, the prospect of rice market is projected to sustain stability in the coming months.

Sugar: FAO sugar price index averaged 372 points in March 2011, indicating 10 percent decrease from the highs in the beginning of this year. The international sugar price trend is mirrored in the local markets in Somalia with sugar price stability observed in Mogadishu and Bossaso. The delayed effects of international sugar price dynamics will ultimately slow down the retail prices of this commodity in the domestic markets in short-run. The prospects of improved outlook in sugar production by the two key world producers, India and Brazil, is favorable³, which is likely to reverse the two year long deficit. However, further direction of the international prices will be gauged from the developments in the next six months.
